Questions

Q1.

a.

$$\begin{aligned} f(x) &= x^3 - 2x - 2 = 0 \\ r &= 1.76929235 \end{aligned} \tag{1}$$

b.

$$\begin{aligned} f(x) &= e^x + x - 7 = 0 \\ r &= 1.67282169 \end{aligned} \tag{2}$$

c.

$$\begin{aligned} f(x) &= e^x + \sin(x) - 4 = 0 \\ r &= 1.12998049 \end{aligned} \tag{3}$$

Q3.

a.

$$f(x) = 27x^3 + 54x^2 + 36x + 8 = 0 \tag{4}$$

$$f'(x) = 81x^2 + 108x + 36 \tag{5}$$

$$f''(x) = 162x + 108 \tag{6}$$

$$f'''(x) = 162 \neq 0 \tag{7}$$

$$\begin{aligned} r &= -\frac{2}{3} \\ f(r) = f'(r) = f''(r) &= 0 \rightarrow \text{multiplicity of } r \text{ is } 3 \end{aligned} \tag{8}$$

Q9.

$$f(x) = 14xe^{x-2} - 12e^{x-2} - 7x^3 + 20x^2 - 26x + 12 \quad (9)$$

$$f'(x) = 14xe^{x-2} + 2e^{x-2} - 21x^2 + 40x - 26 \quad (10)$$

$$f''(x) = 14xe^{x-2} + 16e^{x-2} - 42x + 40 \quad (11)$$

$$f'''(x) = 14xe^{x-2} + 30e^{x-2} - 42 \quad (12)$$

$$r_1 = 0.85714285$$

$$f'(r_1) \approx -2.67817 \neq 0 \rightarrow M = \lim_{i \rightarrow \infty} \frac{e_{i+1}}{e_i^2} = \left| \frac{f''(r_1)}{2f'(r_1)} \right| \approx 1.69939188 \quad (13)$$

$$r_2 = 2.0$$

$$f(r_2) = f'(r_2) = f''(r_2) = 0 \rightarrow \text{multiplicity of } r_2 \text{ is } 3 \quad (14)$$

$$\therefore S = \lim_{i \rightarrow \infty} \frac{e_{i+1}}{e_i} = \frac{m-1}{m} = \frac{2}{3}$$

Code

% Computes the roots of a function using the Newton's Method.
